ROSS CONTROLS® Announces New M35 Series Modular Double Valves

(TROY, MI – September, 2017) – ROSS Controls® introduces its new M35 Series safety exhaust (dump) valve for Category-4, PL e machine guarding applications.

The safety function of the M35 Series valve is to shut off supply of pneumatic energy and to exhaust any pneumatic energy from downstream of the valve.

The ROSS® M35 Series double valve includes the 3/2 normally closed function, dual poppet design, and are based on the proven technology of the SERPAR® Crossflow family of double valves.

This new M35 Series control-reliable double valve is designed with external monitoring for safe redundant operation, and is available with or without EEZ-ON (soft start) function. The EEZ-ON® (soft start) module option allows slower build-up of pressure during start-up. The M35 Series valve is enhanced with a modular mounting design, allowing flexible air entry system assembly.

Additionally, this pending BG Certified valve will be included in the SISTEMA library data that is downloadable from the ROSS website.

For more information on ROSS® M35 Series double valve with soft start capability, contact your local ROSS distributor, ROSS' customer service or visit ROSS' website.
